

## FibreSTEP

### Product Description

The innovative FibreSTEP fibreglass-reinforced plastic GRP ladder and cage system is designed with ref. to BS5395 part 3. The safety cage is ready for field assembly with pre drilled hoops for fast and easy attachment to the ladder and vertical safety bars. Ladders may be ordered with or without safety cage kits. Ladders include heavily ribbed flutes for slip resistant footholds.

Standard FibreSTEP ladders and cages are manufactured with yellow or light grey pultruded structural shapes, creating a lightweight ladder system offering long life and low maintenance service. Walkthrough sections at the top of ladders can also be fitted with a self-closing gate.

#### Fall Arrest System:

When used in conjunction with GlideLoc, FibreSTEP GRP ladders provide a safe and controlled means of vertical access whilst working at height. Combining corrosion resistance, long life and low maintenance design, FibreSTEP/GlideLoc ladders are superior to conventional metallic systems. These advanced systems are designed and manufactured to be easily installed. Components are lightweight and easy to fabricate. Savings on labour and equipment often make the total installed cost of FibreSTEP/GlideLoc comparable to that of steel. Combining its low cost of installation with low-maintenance and long life, FibreSTEP/GlideLoc offers a life cycle cost that is significantly lower than that of its counterparts.

### System Benefits

- Excellent strength to weight ratio
- Extremely hard wearing and durable
- Lightweight
- Corrosion Resistant
- Low maintenance cost
- Long effective service life
- Rapid installation
- All designed bespoke to British Standards

### Colours Available

- Light Grey (RAL 7047)
- Yellow (RAL 1003)
